Sequence 6, Application US/08726883

Patent No. 5676946

GENERAL INFORMATION:
APPLICANT: HAWKINS, PHILLIP R.
APPLICANT: SELLHAMEN, JEFFREY J.
TITLE OF INVENTION: PHOSPHOLIPASE C HOMOLOG
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSEE: INCYTE PHARMACEUTICALS, INC.
STREET: 3330 HILLVIEW AVENUE
CITY: PALO ALTO
                                                                                                                                                                        GENERAL INFORMATION:

TITLE OF INVENTION: POLYHYDROXYALKANOATE CONTAINING UNIT WITH THIENYL STRUCTURE IN THI
TITLE OF INVENTION: CHAIN, PROCESS FOR ITS PRODUCTION, CHARGE CONTROL AGENT, TONER BI
TITLE OF INVENTION: TONER WHICH CONTAIN THIS POLYHYDROXYALKANOATE, AND IMAGE-FORMING
TITLE OF INVENTION: IMAGE-FORMING APPARATUS WHICH MAKE USE OF THE TONER
FILE REFERENCE: CFO163109

        pacificensis, Psychrobacter glacincola, and related species, or Psychrobacter pacificensis only via the use of the 165 rDNA sequence. The 165 rDNA sequence and derived oligonucleotide probe are useful for the species-specific detection of Psychrobacter pacificensis to study and monitor its growth as an indicator of the circulation of deep-sea water. The method of the invention is rapid, accurate and has high sensitivity, and removes the need to separate anculture the biological materials. The present sequence represents a specifically claimed Psychrobacter pacificensis 163 rDNA oligonucleotide probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a 1526 bp Psychrobacter pacificensis 16S rDNA sequence (AAC87511) and an oligomucleotide probe (AAC87512) comprising part of the Psychrobacter pacificensis 16s rDNA sequence which are used for monitoring the growth of psychrophilic bacteria and the dirculation of deep-sea water. Psychrobacter pacificensis is an aerobic, Gramenegative, non-moutile, non-spore-forming oxidase-positive bacterium originally isolated from the Japan Trench. The invention also relates to a novel method for detecting or specifically identifying Psychrobacter glacincola, and related species, or Psychrobacter glacincola, and related species, or Psychrobacter glacincola, and related species, or Psychrobacter glacincola, and related species. The Psychrobacter pacificensis only via the use of the 16S rDNA sequence. The 16S rDNA sequence and derived oligonucleotide probe are useful for the monitor its growth as an indicator of the circulation of deep-sea water. The method of the invention is rapid, accurate and has high sensitivity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA probe originating from psychrotrophic bacterium applicable in species -specific detection of the microorganism as indication in studying and monitoring its growth and circulation of deep-sea water with sensitivity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a novel isolated nucleic acid comprising, or hybridising under low stringent conditions to, any of the 1214 nucleic acid sequences given in the specification, where the expression of the nucleic acid in a plant results in an insect resistant phenotype. The invention may be useful as a plant protectant or for gene therapy. The genes are derived from Arabidopsis thaliana, Nicotiana benthamiana, Oryza sativa and Papaver rhoeas. The isolated nucleic acid and vector are useful for conferring insect resistance and for producing insectresistant plants. The present sequence is that of a DNA sequence of the
and removes the need to separate and culture the biological materials. The present sequence represents the Psychrobacter pacificensis 16S rDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to a novel isolated nucleic acid comprising, or hybridising under low stringent conditions to, any of the 1214 nucleic acid sequences given in the specification, where the expression of the nucleic acid in a plant results in an insect resistant phenotype. The invention may be useful as a plant protectant or for gene therapy. The spenes are derived from Arabidopsis thaliana, Nicotiana benthamiana, Oryza sativa and Papaver rhoeas. The isolated nucleic acid and vector are useful for conferring insect resistance and for producing insect-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; open reading frame; ORFX; detection; cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosupressant; cardiant; immunostimulant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antiviral; antibacterial; antifungal; antirheumatic; antihyroid;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              resistant plants. The present sequence is that of a DNA sequence of the invention which may confer insect resistance to plants.

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic, hepatoropic; valnerary; sequences have activities such as: cytostatic, hepatoropic; valnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antipsoriatic; tantibation; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antihaflammatory; antibacterial; antiviral; antithromal; antithromal; antithromal; antithromal; continued in antiviral; antithromal; antithromal; to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative used to treat cancers, proliferative disorders, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
